- B. L. Turner 1996 The Comps of Mexico, Vol. 6 (old numbering) (= Chapter 6), Tageteae and Anthemideae. **Vol. 10**. \$35

About the Author

Prof. Billie L. Turner, a native of Texas, was educated at Sul Ross State University, Alpine, TX (BA 1949, Pre-law Major); MS, Southern Methodist University, Dallas, TX (1950, Botany-Geology Major); Ph. D. Washington State University, Pullman under Marian Ownbey (1953, Plant Systematics). His teaching career in Academia began at The University of Texas at Austin in 1953 and extended through his retirement from that institution in 2003. During this period he spent one year in Africa (1956-57) traveling about 30,000 miles studying vegetational changes on that continent with the late Homer L. Shantz (Homer Leroy Shantz, Leader of the Expedition, Turner, 2016). He also served as a Visiting Prof. of Botany at the University of Liverpool, England (1966-67), and spent the fall semester of 1974 as a Visiting Prof. of Botany at the University of Massachusetts, Amherst. Some of his greatest professional pleasures resulted from field work in the mountainous regions of the United States and Mexico. He is a specialist on the large family Compositae, having authored several books and over 900 articles on that group of plants, and he is still at it hoping that his last academic words might be, while examining a batch of comp specimens: "be damned if its not new to Science!" Dr. Turner mentored over 80 doctoral students and this may prove to be his greatest contribution to science.
